

PREVENTION OF COCKROACHES AT HOME

Other recommendations:

- Place a mosquito net on the inside of the ventilation grills to avoid roaches coming through the aircon system inside your home.

- Place plugs in bathroom and kitchen sinks, as well as in the bathtub and bidet after each use.
- If you are away for a long period of time (weeks, months, years), flush bleach/ ammonia through your toilet and drains and put the plugs in.

- You can cover the holes of the sinks and bidet with a ball of toilet paper or cover the hole with a special plug that can be found at any hardware store.

- Use traps or spray the areas the roaches have been seen. Any product of the brand Cucal is very effective not only to kill them and their nests on the spot, but also to create a barrier preventing them from coming that lasts 4 weeks:

Cucal Trampa Cucarachas contains a double bait that offers maximum power of attraction and effectiveness. The cockroaches feed on the bait and return to the nest, allowing subsequent contagion to the colony.

Cucal Barrera is an insecticide in spray format that creates a barrier against insects to protect your home and your family against cockroaches, ants, spiders and other crawling insects, with a lasting protection of up to 4 weeks.
